COVID-19 Difficult Airway and Malignant Hyperthermia ED Tools

Audience: ED Providers and Midlevels

If a patient has a history of difficult intubation or a personal or family history of malignant hyperthermia in their history section or on their problem list, these alerts will appear.

Let's Take a Look

Adding either **Difficult Airway** or **Malignant Hyperthermia** to the **History** section or the **Problem List** will generate the **Difficult Airway** or the **Malignant Hyperthermia** banner in the storyboard.

These banners will also show in the **ED Side by Side Trackboard**.
