## COVID-19 Infection: Viewable Across Encounters

**Audience:** All Staff (Registration, Schedules, Nursing, Physician, APP, Residents, Leadership)

COVID-19 infections are now Patient-based and viewable across encounters.

- COVID-19 Rule Out

- COVID-19 Confirmed

The infection can be resolved by hospital **Infection Prevention** staff. It will automatically expire 60 days after it was added.

System-wide clinical staff and physicians can see the documented infections in **Storyboard**, **Schedule** columns (Infection), **Patient List Columns** (Infection), and **Reports**.

### Let's Take a Look

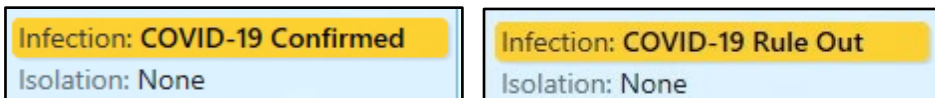

**Hospital Infection Prevention** staff can add the following infections to a patient.

- COVID-19 Rule Out

- COVID-19 Confirmed

### Patient Storyboard

Will contain Infection and Isolation information.

To view additional information, click **Infection** or **Isolation**.

*Result: Patient Infection and Isolation information will display.*

### Schedule

The **Default Schedule** contains an Infection column. If you would like to update your **My Schedule** to contain the infection column, select **Ambulatory Patient Infection Status**.
